主要统计指标解释

EXPLANATORY NOTES TO MAJOR STATISTICAL INDICATORS

主要统计指标解释

总产出 指一定时期内一个国家(或地区)常住单位生产的所有货物和服务的价值,既包括新增价值,也包括转移价值。它反映常住单位生产活动的总规模。

地区生产总值 是指一个国家(或地区)所有常住单位在一定时期内(通常为1年)生产活动的最终成果(简称GDP)。国内生产总值有三种表现形态,即价值形态、收入形态和产品形态。从价值形态看,它是所有常住单位在一定时期内所生产的全部货物和服务价值超过同期投入的全部非固定资产货物和服务价值的差额,即所有常住单位的增加值之和;从收入形态看,它是所有常住单位在一定时期内所创造并分配给常住单位和非常住单位的初次分配收入之和;从产品形态来看,它是最终使用的货物和服务减去进口货物和服务。在实际核算中,国内生产总值的三种表现形态表现为三种计算方法,即生产法、收入法和支出法。三种方法分别从不同的方面反映国内生产总值及其构成。

可比价格 指在不同时期的价值指标对比时,扣除了价格变动的因素,以确切反映物量的变化。按可比价格计算有两种方法:一种是直接用产品产量乘每一年的不变价格计算;另一种使用价格指数换算。

不变价格 指用同类产品的年平均价格作为固定价格,来计算各年产品价值。按不变价格计算的产品价值消除了价格变动因素,不同时期对比可反映出生产的发展速度。新中国成立后,随着工农业产品价格的变化,国家统计局先后五次制定了全国统一的工业产品不变价格和农业产品不变价格,从1949年到1957年使用1952年工(农)业产品不变价格,从1957年到1971年使用1957年不变价格,从1981年到1990年使用1980年不变价格,从1990年开始使用1990年不变价格。

平均每年增长速度 是反映某种现象在一个较长时期中逐期递增的平均速度。在我国计算平均增长速度有两种方法,一种是习惯使用的“水平法”,又称几何平均法,是以间隔期最后一年的水平同基期水平对比来计算平均每年增长(或下降)速度。另一种是“累计法”,又称代数平均法或方程法,是以间隔期内各年水平的总和同基期水平对比来计算平均每年增长(或下降)速度。

在一般正常情况下,两种方法计算的每年增长速度比较接近,但在经济发展不平衡,出现大起大落时,两种方法计算的结果差别较大。

本《年鉴》内所列的平均年增长速度,均用“水平法”计算。从某年到某年平均增长速度的年份,均不包括基期年在内。如建国四十六年的平均增长速度是以1949年为基期计算的,则写为1950—1995年的平均年增长速度。

各个计划时期 表内所用各个“时期”代表的年份如下:恢复时期为1950年到1952年;第一个五年计划(简称一五计划)为1953年到1957年;第二个五年计划(简称二五计划)为1958年到1962年;第三个五年计划(简称三五计划)为1966年到1970年;第四个五年计划(简称四五计划)为1971年到1975年;第五个五年计划(简称五五计划)为1976年到1980年;第六个五年计划(简称六五计划)为1981年到1985年;第七个五年计划(简称七五计划)为1986年到1990年;第八个五年计划(简称八五计划)为1991年到1995年;第九个五年计划(简称九五计划)为1996年到2000年。

支出法地区生产总值 指一个国家(或地区)所有常住单位在一定时期内用于最终消费、资本形成总额,以及货物和服务的净出口总额,它反映本期生产的国内生产总值的使用构成。最终消费 指常住单位在一定时期内对于货物和服务的全部最终消费支出,也就是常住单位为满足物资、文化和精神生活的需要,从本国经济领土和国外购买的货物和服务的支出。它不包括非常住单位在本国经济领土内的消费支出。最终消费分为居民消费和政府消费。

(1) 居民消费:指常住住户在一定时期内对于货物和服务的全部最终消费支出。居民关于货物的最终消费支出在货物的所有权发生变化时记录,关于服务的最终消费支出在服务提供的时候记录。居民消费支出按市场价格计算,即按居民支付的购买者价格计算,货物的购买者价格是购买者取得交货所支付的价格,它包括购买者所支付的运输和商业费用。居民消费支出除了直接以货币形式购买的货物和服务的消费支出外,还包括以其他方式获得的货物和服务的消费支出,即所谓的虚拟消费支出。居民虚拟消费支出包括以下几种类型:单位以实物报酬及实物转移的形式提供给劳动者的货物和服务;住户生产并由本住户消费了的货物和服务,其中的服务仅指住户的自有住房服务;金融机构提供的金融中介服务;保险公司提供的保险服务。

(2) 政府消费:是指政府部门为社会提供的公共服务支出和对居民提供的消费性货物和服务的转移支出。

形固定资产形成总额包括矿藏的勘探、计算机件软、娱乐和文学艺术品原件所获得减处置。

②**存货增加**:指常住单位在一定时期内存货物量变动的市场价值即期末价减期初价的差额。存货增加可以是正值,也可以是负值,正值表示存货上升,负值表示存货下降。它包括生产单位购进的原材料、燃料和储备物资等存货,以及生产单位生产的产成品、在制品和半成品等存货。

货物和服务净出口 指货物和服务出口减货物和服务进口的差额。出口包括常住单位向非常住单位出售或无偿转让的各种货物和服务的价值;进口包括常住单位从非常住单位购买或无偿得到的各种货物和服务的价值。由于服务活动的提供与使用同时发生,因此服务的进出口并不发生出入境现象,一般把常住单位从国外得到的服务作为进口,非常住单位从本国得到的服务作为出口。货物的进口和出口都按离岸价格计算。

劳动者报酬 劳动者报酬是指劳动者因从事劳动活动而获得的全部报酬。它包括劳动者获得的各种形式的工资、奖金和津贴,既包括货币形式的,也包括实物形式的,它还包括劳动者所享受的公费医疗和医药卫生费、上下班交通补贴和单位支付的社会保险费等。单位支付的社会保险费,就是单位直接支付给负责社会保险的政府单位(一般指劳动部门)的社会保险金或为本单位职工离退休、发生死亡、伤残、医疗保险等而支付的保险费。对于个体经济来说,其所有者所获得的劳动报酬和经营利润不易区分,这两部分统一作为劳动者报酬处理。**生产税净额** 指生产税减去补贴后的差额。生产税指政府对生产单位生产、销售和从事经营活动以及因从事生产经营活动使用某些生产要素,如固定资产、土地、劳动力所征收的各种税、附加费和规费。具体包括销售税金及附加、增值税、管理费中开除的各种税、应交的养路费、排污费和水电费附加、烟酒专卖上缴政府的专项收入等。生产补贴与生产税相反,是政府对生产单位的单方面收入转移,因此视为负生产税处理,包括政策亏损补贴、粮食系统价格补贴、外贸企业出口退税收入等。

固定资产折旧 指应定时期内为弥补固定资产损耗按照核定的固定资产折旧率提取的固定资产折旧,或按国民经济核算统一规定的折旧率虚拟计算的固定资产折旧。它反映了固定资产在当期生产中的转移价值。各种类型的企业和企业管理的事业单位的固定资产折旧指实际计提并计入成本费用中的折旧费;不计提折旧的单位,如政府机关、非企业管理的事业单位和居民住房的固定资产折旧则是按统一规定的折旧率和固定资产原值计算的虚拟折旧。原则上,固定资产折旧应按固定资产的重置价值来计算,但是我国目前尚不具备对社会固定资产进行重估价的基础,所以暂时只能采用上述方法计算。

营业盈余 指常住单位创造的增加值扣除劳动者报酬、生产税净额和固定资产折旧后的余额。它相当于企业的营业利润加上补贴,但要扣除从利润中开支的工资和福利以及从税后利润中提取的公益金等。

新增生产能力 指通过固定资产投资活动而增加的设计能力或工程效益,它是实物形态表示的固定资产投资的结果。新增生产能力的计算,是以能独立发挥生产能力或效益的单项工程(或项目)为对象。当单项工程(或项目)建成,经有关部门鉴定合格,正式移交投入生产,即可计算新增生产能力。

新增生产能力或工程效益有以下几种表现形式:

- (1) 以建设项目或单项工程建成后的年生产能力表示。如煤炭开采、石油开采等。
- (2) 以建设项目或单项工程建成后处理原料的能力表示。如选矿工程的年处理矿石能力,洗煤厂年洗原煤能力等。
- (3) 以新增的主要设备数量或容量表示。如棉纺锭枚数、发电机组容量等。
- (4) 以建筑物容积、容量、面积或长度表示。如水库容量,公路铁路里程等。

新增生产能力的数量一般按设计能力计算。设计能力是指设计文件中规定的在正常情况下能够达到的生产能力,而不论投产后的实际产量如何。以设备数量、建筑物容积、面积、长度等表示的新增生产能力(或效益),则按建成的实际数量计算。

Explanatory Notes to Major Statistical Indicators

Total Output refers to value of all goods and services by all resident units in a country (or region) during a certain period of time (one year usually), both including new added value, which refers to the total scale of production activities by resident units.

Gross Domestic Product refers to all the final products of all resident units of a country (or region) during a certain period of time (GDP in brief). Gross Domestic Product is presented in three different forms, i.e. value added, income, and products respectively. The form of value added refers to the total value of all products and services produced by all resident units during a certain period of time, minus total value of inputs of non-fixed assets materials and services or the summation of the value added of all resident units; the form of income includes all income items produced by all resident units and distributed primarily to all resident and non-resident units; the form of product refers to all final goods and services minus imports of goods and services. In the practice of national accounting, Gross Domestic Product is calculated by three approaches, i.e. product approach, income approach, and expenditure approach respectively to reflect Gross Domestic Product and its composition from different aspects.

Comparable Price is applied when comparing value indicators of different periods to reflect accurately the changes in physical value. The price is not considered here. Two methods are used for calculating comparable prices: 1. Multiplying the output of products by their constant price of a certain year; 2. Conversion of the data in current prices by relevant price index.

Constant Prices refer to the average price of a given product in a certain year, which is used to calculate the output value over time. As the output value at constant prices removes the factor of price changes, it reflects the trend of production development over time. Since 1949, with the changes in general price level, the State Statistical Bureau has issued nationally unified constant prices for five times: the 1952 constant prices for 1949—1957; the 1957 constant prices for 1958—1970; the 1970 constant prices for 1971—1981; the 1980 constant prices for 1981—1990; the 1990 constant prices have been used since 1991.

Average Annual Growth Rate refers to the reflect of the average growth rate of certain phenomenon stage by stage in a long period. Two methods for calculating average the growth rate are applied in China. One is often called “level approach” or the method of calculating geometric average, which is derived by comparing the level of the last year of the interval with that of the base year; the other is called “accumulating approach” or algebraic average or equation method, which is derived by comparing the summation of the actual figure of each year in the interval with the figure in the base year.

Usually the results calculated by the two methods are fairly close, but they differ sharply when uneven economic development occurs with striking fluctuations in growth.

The average annual growth rates listed in this statistical yearbook are calculated by “level approach”. The base years are not listed for the average annual growth rate. For instance, the average annual growth rate of 43 years since 1949 is listed as average an annual growth rate of 1950—1995 without listing the base year 1949.

IV. The private investment in house construction in the urban areas and industrial and mining areas as well as the investment in individual investment in the rural areas; The private house construction in the urban areas and industrial and mining areas includes all the private house construction under the jurisdiction of cities, counties, towns and industrial and mining areas, no matter the owner of the house is registered as the permanent resident in the locality or not. The individual investment in the rural areas includes the investment in house construction and purchase of productive fixed assets by the individuals in the rural areas. The individual investment in fixed assets in the rural areas is estimated by the Rural Socio – economic Survey Organization, SSB on the basis of the data collected by the sample survey.

Sources of Funds for Investment in Fixed Assets refer to various funds received during the year by fixed assets investment for construction and purchase of fixed assets. They include balance of funds bought forward from the previous year, subtotal of sources of

funds in this year, and various payable funds. The subtotal of the sources of funds in this year is further divided into six categories: state budgetary investment, domestic loans, bonds, foreign investment, self-raised funds, and other sources of funds.

(1) State budgetary investment It is divided into financial appropriations and financial arranged loans. It includes capital construction fund from central financing (including operation and non-operational fund), special expenditure (loan for replacing petroleum with coal, for example), re-loan after recalling (referring to re-loan after recalling arranged by financing), fund at discount interest, expenditure arranged by financing on tapping the potential and promoting technical transformation and on developing new products, expenditure on urban construction, expenditure on simple construction in commercial department, fund used as investment in fixed assets from development fund or undeveloped areas, fund in local financing of overall state control, etc.

(2) Domestic loans refer to various domestic loans borrowed by fixed assets investment units from banks and non-bank financial institutions during the reference period for the purpose of investment in the fixed assets. Domestic loans include loans issued by banks from their self-owned funds and deposit, loans appropriated by responsible authorities, special loans by government (including loan for replacing petroleum with coal, special loan for reform-through-labor coal mines), loans arranged by local government from special funds, domestic reserve loan, and working loan, etc.

(3) Bonds refer to funds raised by enterprises (companies) or financial institutions through issuing various bonds for the purpose of investment in fixed assets. The bonds include Key Enterprise Bonds and Key Construction Program Bonds issued by the banks on behalf of the state specialized investment companies.

(4) Foreign investment refers to foreign funds received during the reference period for the purpose of investment in fixed assets, (equipment, material, technology include). Foreign investment includes foreign direct investment, loans from foreign countries, and other foreign investments.

(5) Self-raised funds refer to extra-budgetary funds received by construction enterprises for the purpose of investment in fixed assets during the reference period. They include funds owned by various departments of central and local governments and their own enterprises.

(6) Others refer to funds received during the reference period, which are not included in the above mentioned sources.

Investment in Fixed Assets by Sector The classification of construction projects by sector is determined by the major products or the purpose of the projects when they are put into production or use, and by the nature of their social economic activities. The investment in capital construction is classified by construction projects, while investment in innovation, other investment in fixed assets and urban and rural collective units are classified according to the sector which the whole enterprise or institution belongs to. In general, one project of one enterprise or institution can only belong to one sector.

Investment in Fixed Assets by Type of Construction The construction projects in general can be classified by the type of construction into new construction, expansion, reconstruction and moving away and renew. In capital construction, the type of construction is determined by the condition of projects. In investment in innovation, in other investment in fixed assets and investment by rural and urban collective units, the type of construction is determined by the condition of the whole enterprises.

(1) New construction in general refers to newly constructed units. In the case in which value of fixed assets is quite small, and the value of newly added fixed assets exceeds the original ones by three times, the expansion construction is also considered as new construction.

(2) Expansion refers to construction of new major production workshops or independent production line with a factory or in other locations, or construction branch of a factory so as to increase the production capacity of original products. Newly constructed business houses in institutions and organizations (such as the newly constructed teaching buildings in schools, clinics or bed building in hospitals, and office buildings in administrative agencies, etc.) are classified as expansion.

(3) Reconstruction refers to technical innovation and transformation of existing equipment and technical conditions undertaken by enterprises and institutions for the purposes of technological advancement, improvement in product quality, enlarging variety of products, promoting new generation of products, reducing production consumption and cost, promoting comprehensive utilization of sources, strengthening treatment of waste gas, waste water and solid wastes, and safety in production, etc. through new application of technologies and techniques, use of new equipment and materials (including accessory facilities for production or for living and welfare purposes). Construction of new workshops for improving existing production capacity rather than increasing production capacity is also considered as reconstruction.

Investment in Fixed Assets by Industry can be classified into four parts, i.e. primary industry, secondary industry, tertiary industry, and residential buildings. It is an important indicator to study proportions among investment in different purposes. The function

of investment in capital construction, investment in innovation, investment in real estate development, and the investment by urban and rural collective units is determined according to national economic industries.

Investment in Fixed Assets by Structure refers to the three major parts of investment activities, i.e. construction and installation, purchases of equipment and instruments, and other expenses.

(1) Construction and installation (work load of construction and installation) refers to construction projects of various houses and buildings and installation of various equipment and instrument, including construction of various houses, equipment foundations and industrial kiln stoves, preparation works for project construction, and clearing up works, post – project construction, pavement of railways and roads, drilling of mines and construction of oil pipes, water conservancy, air defense underground constructions and other special projects, installation of various machinery equipment, testing operation for pre – testing the quality of installation projects. The value of equipment installed in installation projects is not considered.

(2) Purchase of equipment and instrument refers to the total; value of equipment, tools, and vessels purchased or self – produced which come up to standards for fixed assets. Equipment, tools, and vessels purchased or self – produced for new workshops by newly established or expanded units are categorized as “purchase of equipment and instrument” no matter they come up to the standards for fixed assets or not.

Capital Construction Projects by Size In principle, the classification of size of capital construction projects should be determined according to the whole scale or total investment set in the approved construction plan by higher responsible authorities or in the tentative design, otherwise according to the whole scale or total investment set in the current capital construction plan of the state, provinces, autonomous regions, and municipalities directly under central government. Industrial projects which produce unitary products are classified according to its designed capacity of products; projects which produce multi – products are classified by the designed capacity of the major products or by the total planned investment. Standards for the Classification of Construction Projects into large, medium – sized and small ones issued by the government are the base for size division of construction projects, which was revised in 1958, 1962, 1977 and 1979 respectively and therefore, data on projects by size are not entirely comparable from year to year.

Projects Under Construction refer to projects having construction and installation activities undertaken in the reference period, including projects started in the reference period, or continued from the previous period, or completed and put into production or suspended in the reference period. Projects Completed and Put into Use Industrial projects refer to the major projects and accessory facilities completed which result in forming production capacity and have been checked and accepted while the living and welfare facilities have been completed and can ensure normal production and formally put into production. Non – industrial projects refer to the major projects and accessory facilities completed which possess the designed capacity and have been checked and formally put into production.

Newly Increased Production Capacity refer to the increase of designed capacity and project efficiency through investment in fixed assets, which reflects the accomplishment of investment in fixed assets in kind. The calculation of newly increased production capacity is based on individual projects, which operate independently. When an individual project is completed and checked and accepted and put into production, it is counted as newly increased production capacity.

The newly increased production capacity and project efficiency are usually expressed in one of the following forms:

- (1) Annual production capacity, such as extraction of coal and petroleum;
- (2) Raw material processing capacity, such as ore processing capacity of ore dressing projects, the dressing capacity of a coal washer;
- (3) Number or capacity of major equipment increased, such as the number of cotton spindles increased and the capacity of generating sets increased;
- (4) Physical measures of construction, such as volume, capacity, area, and length, for instance, the capacity of reservoirs, the length of railways and roads.

Newly increased production capacity in terms of quality is calculated in designed capacity in general, which refers to the production capacity a project under normal conditions designed in construction documents regardless of the actual output.

Floor Space of Building Under Construction and Completed refers to total floor space in each story of buildings calculated from the outside line building walls, including the space occupied by constructions like pillars or walls and basements. The floor space of multi – story building includes the total floor space of each story, including area occupied by separating walls, watching rooms, doorways, and pillars, but excluding protruding wall structures, artistic decoration, etc. (for example, flight of steps). The space of recessed verandas and cantilevered balcony is counted by half of the projection area.

Floor Space of Residential Buildings refer to the floor space of the residential buildings under construction and completed among

the total space of buildings under construction and completed. Floor Space of Buildings Completed refers to the floor space of buildings in the reference period, which have come up to the designed standards and have been put into use.

Completion Rate of Floor Space of Buildings refers to the ration of floor space of buildings completed in certain period of time to the floor space of buildings under construction in the same period, which reflects the investment result and economic efficiency of the construction industry from the angle of the speed of projects construction.

Newly Increased Fixed Assets refer to the newly increased value of fixed assets through investment, including the value of projects completed and put into production, the value of equipment, tools, and vessels considered as fixed assets, as well as the relevant expenses as investment in fixed assets. This is a comprehensive indicator in investment of fixed assets, reflecting the achievement of investment in fixed assets in different periods, different sectors, and different regions.

Rate of Construction Projects Completed and Put into Use refers to the ratio of the number of construction projects completed and put into use in certain period of time to the number of projects under construction in the same period. This reflects the investment efficiency from the angle of speed of projects construction.

Rate of Projects of Fixed Assets Completed and Put into Operation refers to ratio of newly increased fixed assets to total investment made in the same period. This is a comprehensive indicator, reflecting the speed of the employment of fixed assets investment and investment efficiency.

Rate of Investment in Projects Uncompleted refers to the ratio of accumulated investment in projects uncompleted to the total annual investment in projects. This reflects the relative size of projects uncompleted and the efficiency of investment in fixed assets from the angle of fund utilization. Since projects uncompleted refer to the projects started but not completed, they often go beyond one year and therefore, the above ratio could be greater than 1.

Retail Price Index This economic index reflects the general change in retail prices of commodities in urban and rural areas. The change and adjustment in retail prices directly affect living expenditure of urban and rural residents and government revenue, purchasing power of residents and equilibrium of market supply and demand, and the proportion of consumption and accumulation. Therefore, retail price index can predict to certain extent the changes of above economic activities from a certain perspective.

Consumer Price Index reflects the relative change in prices of consumer goods and services purchased by urban residents, and is derived from urban consumer price index and rural consumer price index. Consumer price index can be used to predict the impact of consumer price change on actual living cost expenditure of urban and rural residents.

Urban Consumer Price Index reflects the relative change in prices of consumer goods and services purchased by urban families and can be used to observe and analyze the impact of changes in price of consumer goods and services on money wages of staff and workers, and provide base for policy making concerning the living cost and wages of urban residents.

Rural Consumer Price Index reflects the relative change in prices of consumer goods and services purchased by rural households and can be used to observe the impact of changes in price of consumer goods and services on living expenditure and actual change in peasants' living cost. It provides base for making and checking policies concerning prices of farm products.

Index of Purchasing Prices of Farm Products reflects the relative change in purchasing prices of farm products purchase by business enterprises of various types of ownership and related departments. It is used to observe and study the impact of change in purchasing prices of farm products on money income of peasants, and it provides basis for making and checking policies concerning prices of farm products.

Retail Price Index of Rural Industrial Products reflects the relative change in prices of industrial products in rural market and can be used to observe the impact of the price change on farmers' money expenditure.

Ex-factory Price Index of Industrial Products reflects the change in general ex-factory prices of industrial products, including sales of industrial products to commercial enterprises, foreign trade sectors, material supplying and distributing sector as well as sales of production means to industry and other sectors and sales of consumer goods to residents. It can be used to analyze the impact of ex-factory prices on gross industrial output value.

Price Index of Investment of Fixed Assets reflects the changes in prices of investment in fixed assets. The investment in fixed assets consists of three components, namely, the investment in construction and installation, the investment in purchases of equipment and instrument, and the investment in other items. Price index of investment in fixed assets is calculated as the weighted arithmetic mean of the price indices of the three components of investment in fixed assets.

Price index of investment in fixed assets reflects the changes of prices in various goods and services involved in investment in fixed assets and therefore can be used to observe the actual size, speed, structure and efficiency of investment in fixed assets and provide reli-

able and scientific data for government planning, management, decision – making, and further improving the current national accounting system..

Prior to 1984, the rural industry run by village and cooperative organizations under village was classified as agriculture. Since 1984, it has been grouped into industry.

Units of Industrial Statistics and Inquiry They are classified into two categories (1) corporate industrial enterprises with independent accounting system (2) industrial establishments.

(1) Corporate industrial enterprises with independent accounting system refer to enterprises engaging in industrial production activities, which meet the following requirements: ① They are established legally, having their own names, organizations, location, able to take civil liability; ② They process and use their assets independently, assume liabilities, and are entitled to sign contracts with other units; ③ They are finally independent of income and expenditure separately.

(2) Industrial establishment refer to economic units which are located in one single place and engaged entirely or primarily in one kind of industrial activity, including financially independently industrial enterprises and units engaged in industrial activities under the non-industrial enterprises (or finally dependent). Industrial establishments generally meet the following requirements: ① they have one location and are engaged in one kind of industrial activity each; ② They operate and manage their industrial production activities separately; ③ They have accounts of income and expenditure separately.

Units of Over-norm Industrial Statistics and Inquiry refer to the state-owned industrial enterprises and non state-owned industrial enterprises with 5 million yuan above of revenue of product sales.

Light Industry refers to the industry which produces consumer goods and hand tools. It consists of two categories, depending on the materials used:

(1) Industry using farm products as raw materials. These are branches of light industry which directly or indirectly use farm products as basic raw materials, including the manufacture of food and beverage, tobacco processing, textile, clothing, fur and leather manufacturing, paper making, printing, etc.

(2) Industrial using non-farm products as raw materials. These are branches of light industry which use manufactured goods as raw materials, including the manufacture of cultural, educational articles and sports goods, chemicals, synthetic fiber, chemical products for daily use, glass products for daily use, metal products for daily use, hand tools, medical apparatus and instruments, and the manufacture of cultural and clerical machinery.

Heavy Industry refers to the industry which produces capital goods, and provides various sectors of the national economy with necessary material and technical basis. It consists of the following three branches according to the purpose of production or the use of products:

(1) Mining, quarrying and logging industry refers to the industry that extracts resources, including extraction of petroleum, coal, metal and non-metal ores and logging.

(2) Raw materials industry refers to the industry that provides various sectors of the national economy with raw materials, fuels and power. It includes smelting and processing of metals, coking and coke chemistry, chemical materials and building materials such as cement, plywood, and power, petroleum refining and coal dressing.

(3) Manufacturing industry refers to the industry that processes raw materials. It includes machine-building industry which equips sectors of national economy, industries of metal structure and cement products, industries producing means of agricultural products, such as chemical fertilizers and pesticides.

According to the above principle of classification, the repairing trades, which are engaged primarily in repairing products of heavy industry, are classified into heavy industry while those engaged in repairing products of light industry are classified into light industry.

Gross Industrial Output Value is the total volume of industrial products sold or available for sale in value terms which reflects the total achievement and overall scale industrial production during a given period. It includes the value of the finished products, which are not to be further processed in the enterprises and have been inspected, packaged and put in storage, the value of the industrial services rendered to other units and the changes in the value of the semi-finished products and products in process changes). The gross industrial output value is calculated with "factory method". No doubt calculations are to be made within the same enterprise. However, double counting does occur among different enterprises.

Output value of light industry and heavy industry is also classified with the "factory" method. Under normal conditions, if the major products of an industrial enterprise belong to light industry products, the gross output value of those enterprises is classified wholly into light industry; the same principle applies to heavy industry.

Value Added of Industry refers to the final results of industrial production of the industrial trade in money terms during the reference period. Original Value of Fixed Assets refers to the original value of all fixed assets owned by industrial enterprises, calculated at the cost paid at the time of purchase, installation, construction, expansion, and technical innovation and transformation of the said assets, which includes expenses on purchase, package, transportation, and installation, etc.

Net Value Of Fixed Assets is obtained by deducing depreciation over years from the original value of fixed assets. Working Capital

Total Profits refers to the profits gained by the enterprises. Value Added Tax Payable refers to the amount of value added tax which should be paid by the enterprises in the reference period.

Ratio of Pre-tax to Gross Output Value refers to the ratio of the total amount of pre-tax profits gained (including total profits, sales tax and extra charges of profits as well as the value added tax payable) in the reporting period to the gross output value in the same period (the ratio is expressed in percentages). The formula is as follows:

$$\text{Ratio of Pre-tax Profits to the Gross Output Value (\%)} = \frac{\text{Total Amount of Pre-tax Profits}}{\text{Gross Industrial Output Value}} \times 100\%$$

Overall Labor Productivity of Industrial Enterprises refers to the average output per staff and worker in industrial enterprises in the value added and the average number of staff and workers of an industrial enterprises in a given period are used to calculate the overall labor productivity. The formula used is:

$$\text{Overall Labor Productivity} = \frac{\text{Value Added of Industry}}{\text{Average Number of Staff and Workers}} \times 100\%$$

For the purpose of comparison of the overall labor productivity among different years, the data on the overall labor productivity of the years prior to 1990 have been adjusted on the basis of 1990 constant prices.

It is the stockholders' equity in stock companies.

Statistical Units in Construction refers to the establishments engaged in the construction of buildings and structures and in the installation of equipment. They can be divided into two categories: corporate construction enterprises and affiliated construction units, depending on their way of organization. A corporate construction enterprise is a legal entity with independent accounting system, especially set up to undertake construction activities. It should meet the following 3 requirements: ① being set up in line with relevant legal basis, having its full name, organization and location, and capable of taking civil liabilities; ② independently possessing and using its assets and assuming its liabilities, and entitled to sign contracts with other institutions; and ③ making independent accounts of its profits and losses, and capable of completing its balance sheet.
